Theoretical Background

- Ovarian reserve – mainly determined through AMH – is predictive for infertility treatment and for fertility protection – for estimating the risk to get a chemotherapy induced POI (Brougham et al., 2012).
- Nevertheless, the reliability may be limited as a prognostic factor for the ovarian response (Broer et al., 2013, Kelsey et al., 2011).
- This questions if AMH reflects the real follicular reserve (primordial/primary follicles).

Study question

Does serum AMH correlate with the number of primary/primordial follicles?

Material & Methods

- 1.068 patients underwent ovarian tissue freezing before gonadotoxic treatment from 03/11 to 09/2016.
- Three standardized 2-mm biopsies were taken from the tissue before freezing (n=1068) and follicular density (FD) was analysed by tissue digestion, calcein staining and microscopically counting.
- Concentration of AMH was measured (n=880) in serum, taken at the time of tissue removal (ng/ml, Gen II Elisa Kit, Beckman Coulter GmbH).
- Normograms of AMH concentration and follicular density were drawn in relation to women's age.

Characteristics of trial participants, included in the analysis

Age (years, mean±SD, range)	28.11 (±6.92, 3-45 y)
AMH (ng/mL, mean±SD, range)	3.09 (±2.89, 0.2-23.1)
FD (mean, mean±SD, range)	163.81 (±98.71, 2-1751)
Diseases (n/total)	
Breast cancer	546/1.068
Hodgkin's Lymphoma	193/1.068
Non-Hodgkin's Lymphoma	51/1.068
Leukemia	18/1.068
Sarcoma	53/1.068
Cerebral cancer	20/1.068
Gastrointestinal cancer	26/1.068
Gynecological cancer	28/1.068
Other types of malignancies	20/1.068
Benign disease	48/1.068
Unknown diseases	65/1.068

Sarcoma, n=43
19.7y ± 5.1
AMH 3.6 ng/ml
40.7 follicles per mm²

Gastrointest. cancer, n=22
32.1y ± 4.3
AMH 4.0 ng/ml
16.8 follicles per mm²

Summary

- I. The profile of the normograms are different for follicle density and AMH.
- II. The correlation of follicle density and AMH is very low (R=0.28).
- III. The correlation is especially low in younger women.
- IV. AMH does not reflect the real follicle density.

Discussion

- Is AMH a good prognostic factor for the ovarian reserve?
- Is AMH a good prognostic factor for estimating the risk of infertility of women receiving gonadotoxic therapy?
- Should we rather use the follicle density to calculate the amount of ovarian tissue to be transplanted?

THANK YOU FOR YOUR ATTENTION!
